

A History of Fiberglass and Composite Technology LLC.

Here is how it all started. Many of our qualified professionals at F.A.C.T. Group gained experience in the fiberglass pipe division of Rock Island Oil and Refining, later known as Koch Fiberglass Products, during the 1950's into the 1980's. That Company formed by Fred C. Koch, an entrepreneur from Wichita, Kansas, was the worlds first manufacturer of filament-wound down hole tubing. Koch exited the fiberglass business in the late 1980's.

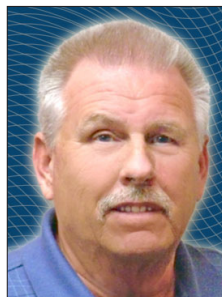

Many F.A.C.T. engineers have over 30 years experience developing oil field equipment. The knowledge base of employees at F.A.C.T. give us the highest experience level average of any fiberglass pipe and fittings winding company ever.

F.A.C.T. has improved the manufacturing process and technologies and now uses a more diverse group of materials. Our lower overhead allows us to offer products at a savings to the customer without sacrificing QUALITY!

Most end users feel that the industry is lacking personal attention to the distributors and end users of fiberglass pipe. In many cases, the manufacturers who have been supplying fiberglass pipe and fittings do not react very well to the customer's needs and suggestions. Our company is focused on helping the customer solve problems through the use of standard products as well as developing solutions needed with new products.

With our new machine capabilities and positive attitude, we will be a positive attraction for those customers who are seeking personal attention for fiberglass pipe and fittings. We will become a "ONE STOP SHOP" for fiberglass goods. Our "ONE STOP SHOP" Will be for fiberglass products of all kinds with support items.

Call us for your "FIBERGLASS" NEEDS"!
